

Phase-02 Business-Requirements-Document

1. Introduction :

The purpose of this Business Requirements Document (BRD) is to define the business objectives, project scope, requirements, and expected outcomes for the Feastigo End-to-End Data Analytics Project.

This document serves as the foundation for the project by clearly identifying the business problems to be addressed and the analytical approach that will be followed throughout the project lifecycle.

2. Problem Statement :

Feastigo handles thousands of food delivery transactions involving customers, restaurants, delivery partners, and payments.

Although large amounts of data are generated every day, there is no structured analytical process to identify customer behavior, restaurant performance, rider efficiency, delivery delays, or revenue trends.

Without proper analysis, business decisions become difficult.

This project aims to transform raw operational data into meaningful business insights that support better decision-making.

3. Business Objectives

- Improve customer satisfaction.
- Increase business revenue.
- Reduce delivery time.
- Increase customer retention.
- Improve restaurant performance.
- Improve rider productivity.
- Reduce order cancellations.
- Support business expansion.

4. Project Scope

In Scope

- Customer Analysis
- Restaurant Analysis
- Rider Performance
- Revenue Analysis
- Payment Analysis
- Order Analysis
- Delivery Analysis
- Dashboard Development
- Business Recommendations

Out of Scope

- Mobile Application Development
- Website Development
- GPS Tracking
- Payment Gateway Development
- Restaurant Management System Development

5. Stakeholders

Stakeholder	Responsibility
Management	Strategic decisions
Customers	Place food orders
Restaurants	Prepare food

Delivery Partners	Deliver orders
Marketing Team	Customer acquisition
Finance Team	Revenue monitoring
Operations Team	Daily operations

6. Functional Requirements

- Store customer details.
- Store restaurant details.
- Store rider details.
- Store order details.
- Store payment information.
- Generate reports.
- Calculate KPIs.
- Display dashboards.

7. Non-Functional Requirements

- Data accuracy
- Data consistency
- Fast query execution
- Reliable reporting
- Secure data storage
- Scalable database

8. Business Questions

- Which restaurant generates the highest revenue?

- Which customers place the most orders?
- What are the busiest ordering hours?
- Which payment method is most popular?
- Which riders complete the highest number of deliveries?
- Which restaurants receive the lowest ratings?
- Which coupons increase sales?
- Which areas have the highest demand?

9.Business Questions

- Which restaurant generates the highest revenue?
- Which customers place the most orders?
- What are the busiest ordering hours?
- Which payment method is most popular?
- Which riders complete the highest number of deliveries?
- Which restaurants receive the lowest ratings?
- Which coupons increase sales?
- Which areas have the highest demand?

10.Success Criteria

The project will be considered successful if it:

- Improves business visibility.
- Identifies business trends.
- Supports decision-making.
- Improves customer satisfaction.
- Reduces delivery delays.
- Increases operational efficiency.

11.Deliverables

- Business Requirements Document
- Database Design
- Dataset

- SQL Scripts
- Python Analysis
- Statistical Analysis
- Predictive Models
- Power BI Dashboard
- Final Business Report
